

Project Report

Team ID	PNT2022TMID02520
Project Name	Visualizing and predicting heart disease with an interactive dashboard

1. INTRODUCTION

1.1 Project Overview

This project overview is mainly composed of data analytics and dataset provided it predicts the heart disease based on the symptoms and the dataset given. Early detection of cardiac diseases and continuous supervision of clinicians report reduces the rate of mortality. The data analytics gives the overview to the patient and the organisation about their disease and their medication.

1.2 Purpose

The purpose of this project is to visualize and predict the type of heart disease which is analysed by the dataset given and processed in platform of cognos analytics. The purpose mainly concerns on treatment on risk factors such as heart attack and stroke; prevention of repeat cardiovascular events; and reduction in deaths from cardiovascular disease.

2.LITERATURE SURVEY

2.1 Existing problem

Having high cholesterol increases the risk of atherosclerosis. Atherosclerosis has been linked to heart attacks and strokes. Diabetes increases the risk of heart disease. Obesity and high blood pressure increase the risk of diabetes and heart disease. Excess weight typically worsens other heart disease risk factors. The Existing problem mainly concerns on manual screening .

2.3 Problem Statement Definition

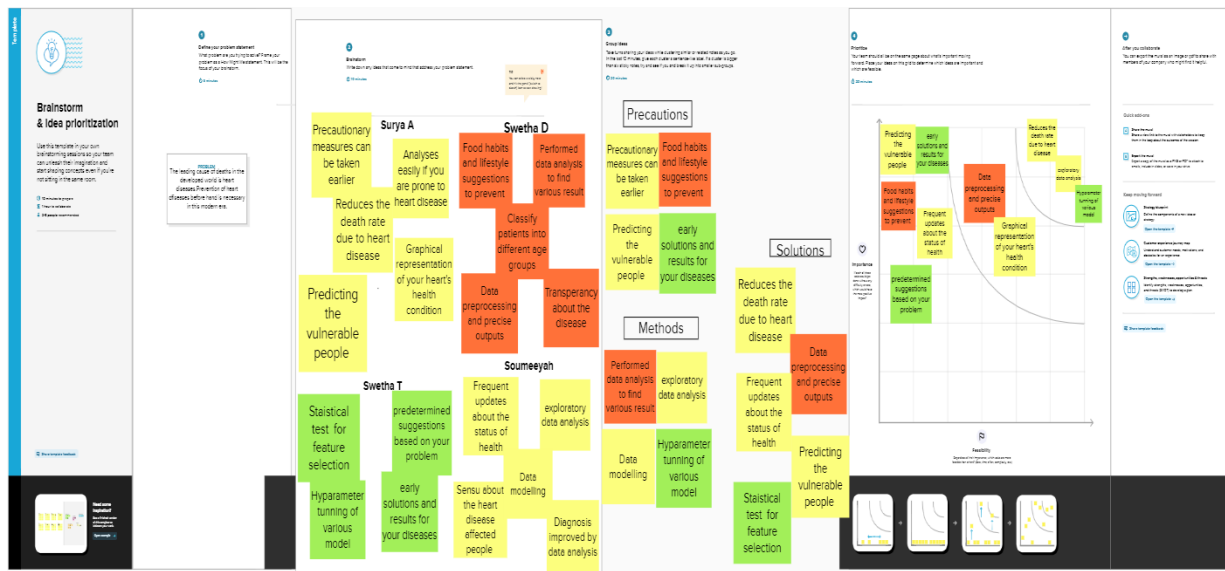

Heart disease analysis is determined as the cause of emerging rates to scrutinize the effect of deadly causes which can be resolved by accurate analysis. What can be the appropriate analysis for effective functioning? The output of the algorithm after it has been trained on a historical dataset and applied to new data when forecasting the likelihood of a particular outcome.

3. IDEATION AND PROPOSED SOLUTION

3.1 Empathy Map Canvas

3.2 Ideation & Brainstorming

3.3 Proposed Solution

In this phase the requirement are collected and accessed .this project predicts people with cardiovascular disease by extracting the patient medical history and previous analysis on trauma data . analysis in medicine is becoming more and more frequent to clarify analyses and optimal prediction of results .The proposed solution customizes on the prediction with the symptoms such as lightheadness,chestpain,vomiting relating the symptoms with the dataset.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Heart disease analysis is determined as the cause of emerging rates to scrutinize the effect of deadly causes which can be resolved by accurate analysis what can be the appropriate analysis for effective functioning?
2.	Idea / Solution description	In this phase the requirement are collected and accessed .this project predicts people with cardiovascular disease by extracting the patient medical history and previous analysis on trauma data . analysis in medicine is becoming more and more frequent to clarify analyses and optimal prediction of results
3.	Novelty / Uniqueness	This work is particularly interested in the category of data obtained this research work aims to design a frame work for heart disease prediction by using major risk factors based on different algorithms and dashboard as an optimal technique
4.	Social Impact / Customer Satisfaction	The customer satisfaction on this data analysis is effective because the treatment can be precisely and effectively made to the patients at emergency condition .it can be even more cost effective as it rely on the analysis and immediate cure instead of evaluating with all testing procedures.

3.4 Problem Solution fit

Problem-Solution fit canvas 2.0		Purpose / Vision	
Define CS, fit into CC	1. CUSTOMER SEGMENT(S) <small>Who is your customer? i.e. working parents of 0-5 y.o. kids</small> Men age 45 and older and women age 55 and older have a greater risk.some risk factor may affect heart disease risk differently in women than in men...	6. CUSTOMER CONSTRAINTS <small>What constraints prevent your customers from taking action or limit their choices of solutions? (i.e. spending power, budget, no cash, network connection, available devices)</small> Some people are not willing to go to hospital due to Financial Constraint and some staying at remote locations. Difficulty in finding a good doctor.High Maintenance costs.The shortage of nurses and Doctor.	5. AVAILABLE SOLUTIONS <small>Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking</small> Visiting the Experienced Cardiologist to Verify.
	<div>Explore AS, differentiate</div>		
Focus on J&P, tap into BE, understand RC	2. JOBS-TO-BE-DONE / PROBLEMS <small>Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides.</small> Control your blood pressure. Dont' smoke. Manage Stress. Stay at a healthy weight.	9. PROBLEM ROOT CAUSE <small>What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations.</small> Reason of increase in heart disease will not be rootly identified. Because Heart Disease is hereditary. Difficulty of Predicting a Heart Disease. The main reason of getting congenital heart defect blood pressure,smoking and mental Depression .	7. BEHAVIOUR <small>What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace)</small> First of all the customer or patient should report what problem they are undergoing according to their health condition.then they should, Schedule an appointment Search for The best Cardiologist online. Speak to family or friends regarding solution.
	<div>Focus on J&P, tap into BE, understand RC</div>		
Identify strong TR & EM	3. TRIGGERS <small>What triggers customers to act? (i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news)</small> Diets high in fat,salt,sugar and Cholesterol have been linked to heart disease..	10. YOUR SOLUTION <small>If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.</small> Our Solution is about to find out the persons where all on the edge to gescought by heart disease.for this we taking a survey on people health conditions by age gender,and what type of looks they are in by this we predict and visualize the people .	8. CHANNELS of BEHAVIOUR <small>8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7</small> Talk with friends and family. patient will be part of virtualization
	4. EMOTIONS: BEFORE / AFTER <small>How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure > confident, in control - use it in your communication strategy & design.</small> Depression Anxiety Isolation	<small>8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.</small> Reach out to the nearest Cardiologist	<div>Extract online & offline CH of BE</div>

4.REQUIREMENT ANALYSIS

4.1 Functional requirements

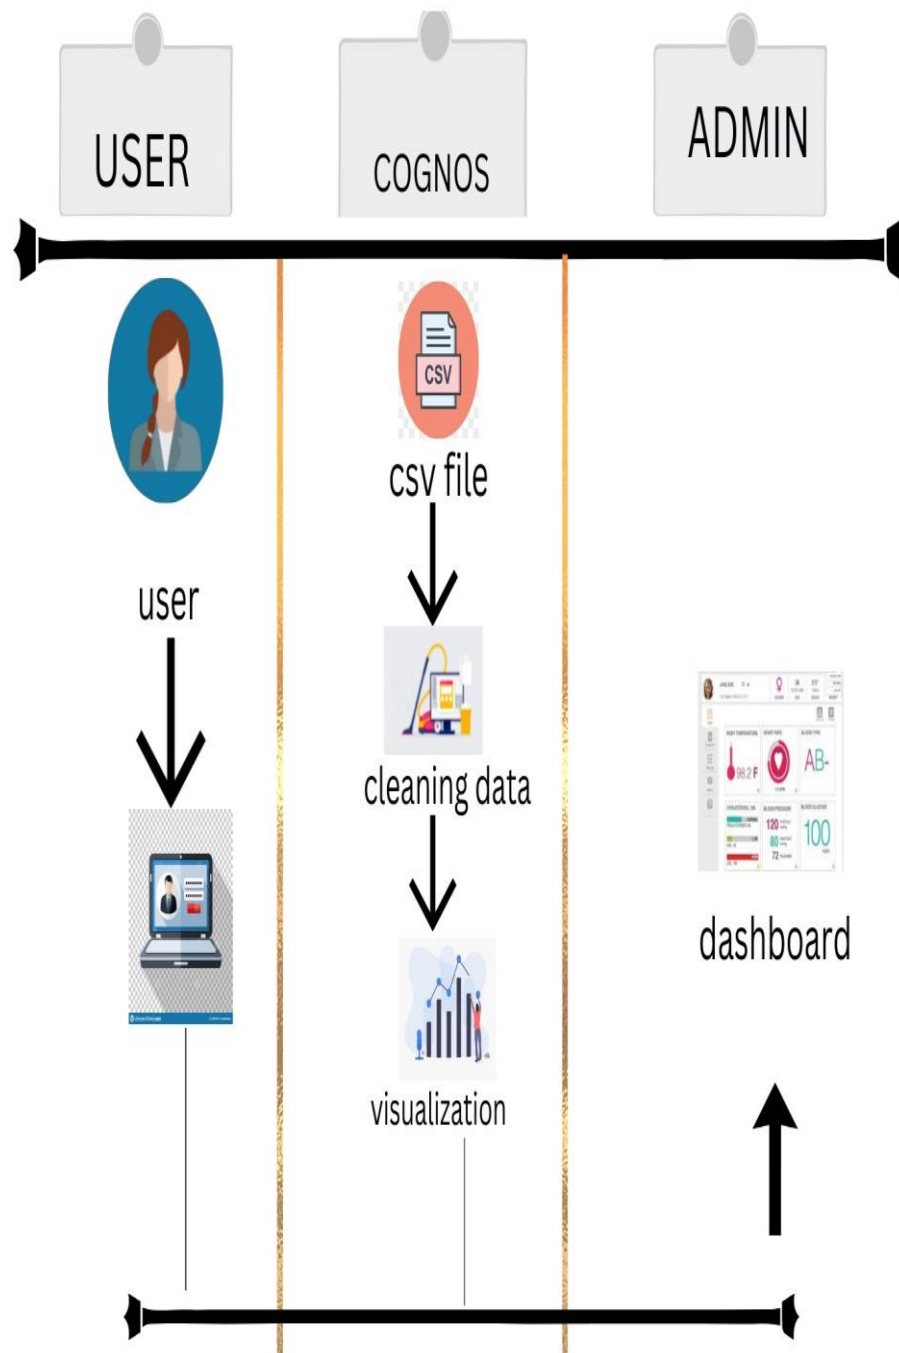

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail Registration through LinkedIn
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	User Login	Login using Username and Password Login using Mobile No or Email Id

4.2 Non Functional Requirements

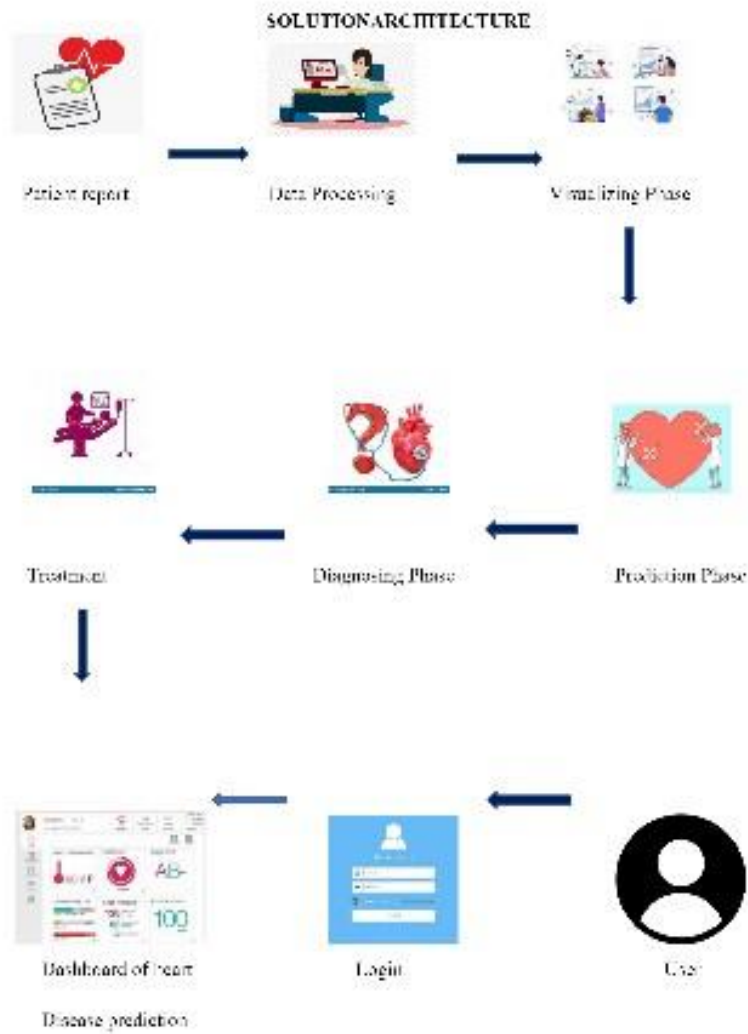

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	In order to overcome this issue, this work proposes a new architecture for real me health status prediction and It involves watching a group of users interacting with your dashboard.
NFR-2	Security	Providing a secure platform to users is crucial as it involves user upload their report details on the dashboard.
NFR-3	Reliability	Specification can be depended on to be accurate and the quality of being trustworthy or of performing consistently well.
NFR-4	Availability	To make sure that the dashboard is easily accessible and the quality of being able to be used or obtained.
NFR-5	Scalability	The ability of a computing process to be used or the measure of the dashboard's ability to increase or decrease in performance and produced in a range of capabilities.

5.PROJECT DESIGN

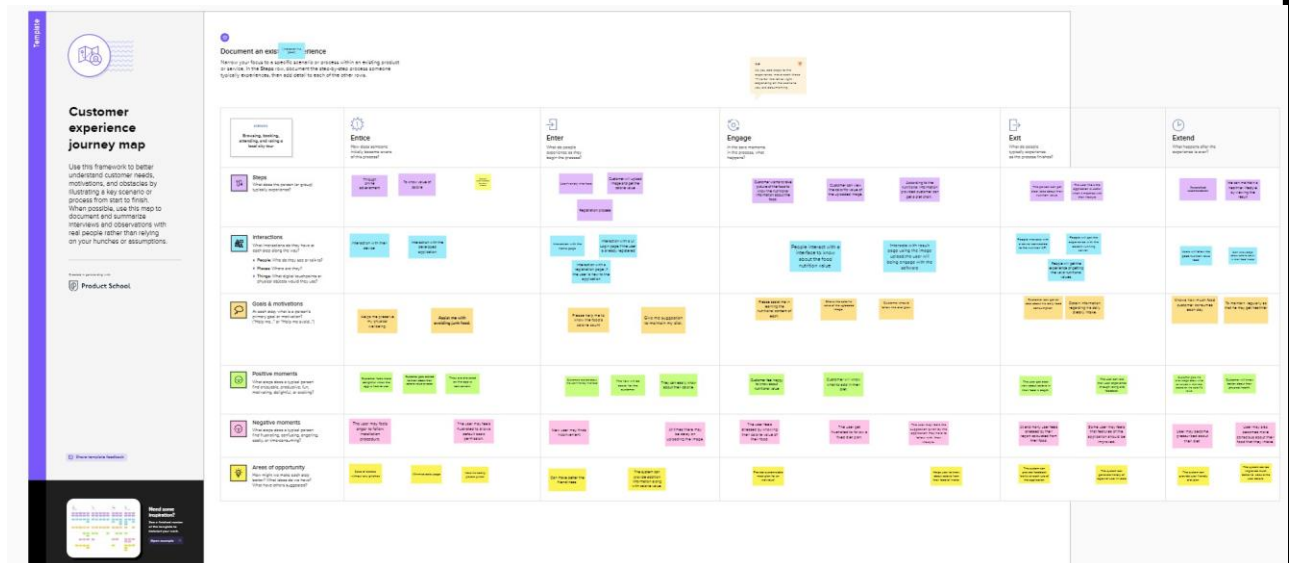

5.1 Data Flow Diagrams

5.2 Solution & Technical Architecture

5.3 User Stories

6. PROJECT PLANNING & SCHEDULING

6.1 Sprint Planning & Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint 1	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	9	High	Surya.A
			As a user, I will receive confirmation email once I have registered for the application.	4	Low	Swetha.D
		USN-2	As a user, I can register for the application through Gmail.	7	Medium	Swetha.T

	Login	USN-3	As a user, I can log into the application by entering email & password.	9	High	Soumeeyah
Sprint 2	Working with the Dataset	USN-4	Importing the dataset on Cognos platform and understand, clean and prepare the dataset.	9	High	Surya.A Soumeeyah
	Data Visualization chart	USN-5	After importing the dataset, we create some visualizations to understand more about the predicting heart diseases.	7	Medium	Swetha.D, Swetha.T
Sprint 3	Creating the Dashboard	USN-6	Creating the dashboard to display the visualizations which gives insights of predicting the Heart diseases.	9	High	Swetha.T, Surya.A, Swetha.D
Sprint 4	Export the Analytics	USN-7	Exporting the created dashboard to showcase the work to others.	9	High	Soumeeyah, Surya.A,

6.2 Sprint Delivery Schedule

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

6.3 REPORTS FROM JIRA

7. CODING & SOLUTIONING

7.1 Feature 1

REGISTRATION:

The new user should register with user name, password and the email id to access the website. After registering, user's login credentials will be stored in the database.

7.2 Feature 2

Working with colab:

we are visualzing and predicting heart disease with an interactive dashboard by using the colab as well as with ibm cognos and cloud.

```
import numpy as np import  
pandas as pd import  
matplotlib.pyplot as plt from  
matplotlib import rcParams from  
matplotlib.cm import rainbow  
%matplotlib inline import warnings  
warnings.filterwarnings('ignore') from  
sklearn.neighbors import KNeighborsClassifier from  
sklearn.tree import DecisionTreeClassifier from  
sklearn.ensemble import RandomForestClassifier df =  
pd.read_csv('dataset.csv') df.info() df.describe()  
import seaborn as sns
```

```

#get correlations of each features in
dataset corrmatrix = df.corr()

top_corr_features = corrmatrix.index

plt.figure(figsize=(20,20))

#plot heat map

g=sns.heatmap(df[top_corr_features].corr(),annot=True,cmap="RdYlGn"
) df.hist() sns.set_style('whitegrid')

sns.countplot(x='target',data=df,palette='RdBu_r') dataset =
pd.get_dummies(df, columns = ['sex', 'cp', 'fbs', 'restecg', 'exang', 'slope',
'ca', 'thal'])

from sklearn.model_selection import train_test_split
from sklearn.preprocessing import StandardScaler

standardScaler = StandardScaler()

columns_to_scale = ['age', 'trestbps', 'chol', 'thalach', 'oldpeak']
dataset[columns_to_scale] =
standardScaler.fit_transform(dataset[columns_to_scale])
dataset.head() y = dataset['target']

X = dataset.drop(['target'], axis = 1)

from sklearn.model_selection import cross_val_score

knn_scores = [] for k in range(1,21):

    knn_classifier = KNeighborsClassifier(n_neighbors = k)

    score=cross_val_score(knn_classifier,X,y,cv=10)

    knn_scores.append(score.mean()) plt.plot([k for k in
range(1, 21)], knn_scores, color = 'red') for i in
range(1,21):

```

```

plt.text(i, knn_scores[i-1], (i, knn_scores[i-1])) plt.xticks([i for i in
range(1, 21)]) plt.xlabel('Number of Neighbors (K)')
plt.ylabel('Scores') plt.title('K Neighbors Classifier scores for
different K values') knn_classifier =
KNeighborsClassifier(n_neighbors = 12)
score=cross_val_score(knn_classifier,X,y,cv=10) score.mean() from
sklearn.ensemble import RandomForestClassifier
randomforest_classifier=
RandomForestClassifier(n_estimators=10) score.mean()

```

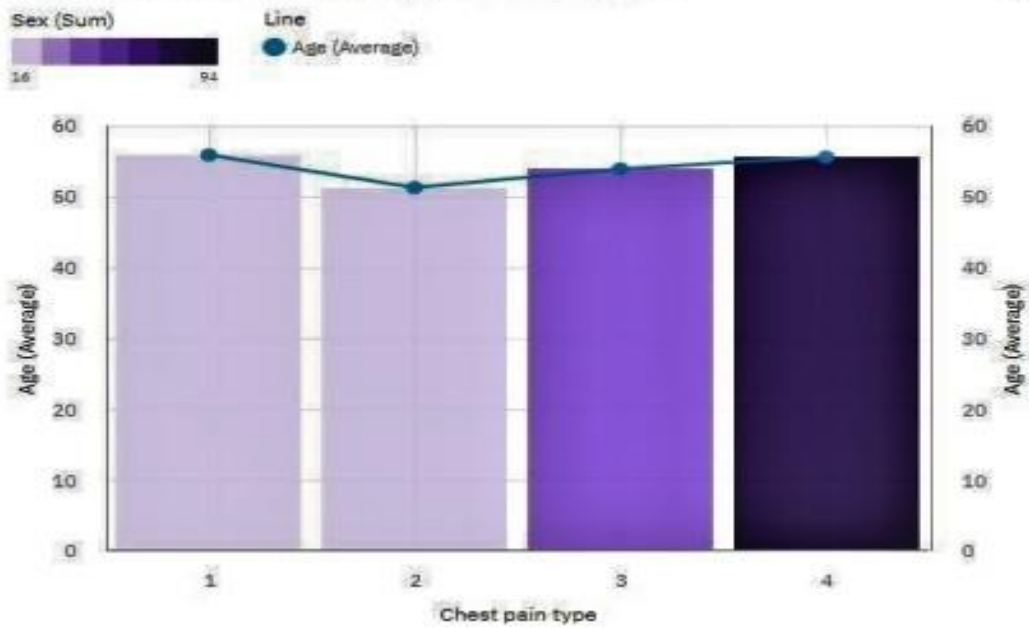

RANDOM FOREST ALGORITHM:

Random forest is a Supervised Machine Learning Algorithm that is used widely in Classification and Regression problems.

K-NEAREST NEIGHBOR ALGORITHM:

The k-nearest neighbors algorithm, also known as KNN or k-NN, is a non-parametric, supervised learning classifier, which uses proximity to make classifications or predictions about the grouping of an individual data point

Age and Age for Chest pain type colored by Sex

BP by Age

Cholesterol by Sex and Age colored by Sex

8.TESTING

8.1 Test Cases

Test caseID	Feature Type	Component	Test Scenario
LoginPage_TC_OO 1	Functional	Home Page	Verify user is able to see the Login/Signup popup when user clicked on My account
LoginPage_TC_OO 2	UI	Home Page	Verify the UI elements in Login/Signup popup
LoginPage_TC_OO 3	Functional	Home page	Verify user is able to log into application with Valid credentials
LoginPage_TC_OO 4	Functional	Login page	Verify user is able to log into application with InValid credentials

LoginPage_TC_OO 4	Functional	Login page	Verify user is able to log into application with InValid credentials
----------------------	------------	------------	--

Testcase ID	Feature Type	Component	TestScenario
LoginPage_TC_OO 5	Functional	Login page	Verify user is able to log into application with InValid credentials
LoginPage_TC_OO 6	Functional	Login page	Verify user is able to the log into application with valid credentials.
LoginPage_TC_OO 7	Functional	Home page	User must be able to navigate between different seconds.
LoginPage_TC_OO 8	Functional	Home page	User must be able to change the visualization according to their requirements.
LoginPage_TC_OO 9	Functional	Home page	User must be able to navigate to different tabs using the given link.

8.2 USER ACCEPTANCE TESTING

PURPOSE :

The purpose is to briefly explain the test coverage and open issues of the project at the time of the release to User Acceptance Testing.[UAT]

DEFECT ANALYSIS:

This report shows the number of resolved or closed bugs at each severity level, and show they were resolved.

Resoluti on	Severit y1	Severity2	Severity3	Severity4	Subtotal
By Design	8	2	2	3	17
Duplicate	1	0	3	0	4
External	3	2	0	1	6
Fixed	9	2	4	16	29
Not Reproduced	0	0	1	0	1
Skipped	0	0	0	0	0
Won'tFix	0	5	2	1	8
Totals	21	11	12	22	65

TEST CASE ANALYSIS:

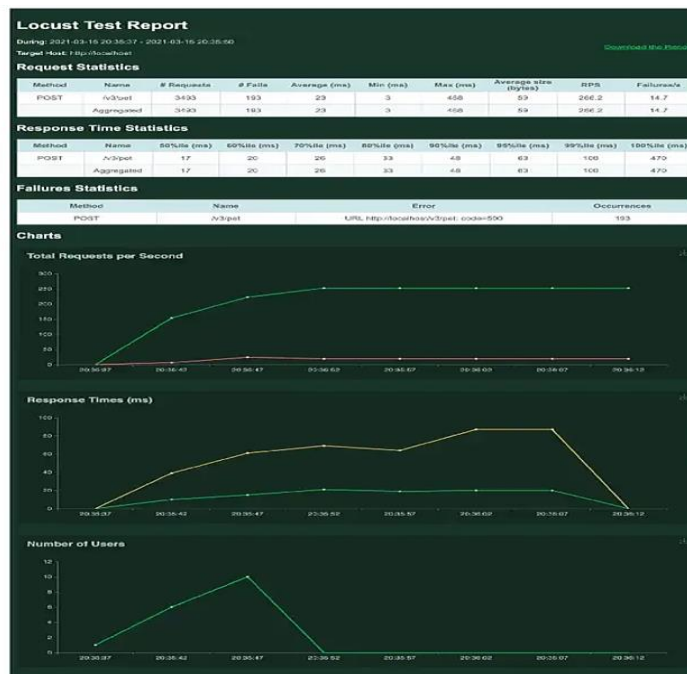

This report shows the number of test cases that have passed, failed and untested.

Section	TotalCases	Not Tested	Fail	Pass
PrintEngine	7	0	0	7
ClientApplication	51	0	3	48
Security	2	0	1	1
OutsourceShipping	3	0	2	1
ExceptionReporting	9	0	0	9
FinalReportOutput	4	0	0	4
VersionControl	2	0	1	1

9.RESULTS

9.1 Performance Metrics

S.No.	Parameter	Screenshot / Values
1.	Dashboard design	No of Visualizations / Graphs - 6
2.	Data Responsiveness	People experiencing the chest pain <ul style="list-style-type: none"> • Average BP during the chest pain • Maximum heart rate during the chest pain • BP along with age • Cholesterol by age and gender
3.	Amount Data to Rendered (DB2 Metrics)	The dataset is trained and visualized using Cognos and it is connected to the IBM cloud.
4.	Utilization of Data Filters	Visualizations are utilized in order to filter the data.
5.	Effective User Story	No of Scene Added - 6
6.	Descriptive Reports	No of Visualizations / Graphs - 6

10.ADVANTAGES AND DISADVANTAGES

ADVANTAGES:

- The system uses 15 medical parameters such as age, sex, blood pressure, cholesterol, and obesity for prediction.

DISADVANTAGES:

- Data mining techniques does not help to. provide effective decision making.
- Cannot handle enormous datasets for.

11.CONCLUSION

This Heart Disease detection system assists a patient based on his/her clinical information of them been diagnosed with a previous heart disease. The algorithms used in building the given model are Logistic regression, Random Forest Classifier and KNN [22]. The accuracy of our model is 87.5%.

12.FUTURE SCOPE

The objective of this project is to check whether the patient is likely to be diagnosed with any cardiovascular heart diseases based on their medical attributes such as gender, age, chest pain, fasting sugar level, etc.
